autodoc

September 2018

An automatic documentation generator using emacs-lisp

A. Buchet

au.buchet@gmail.com

autodoc is an open source documentation generator using emacs-lisp to generate a .tex documentation file and can print it as a .pdf file using pdftex. autodoc is fully configurable and can be used with many languages and many templates.

Contents

Prerequisites	2
---------------	---

Files	3
-------	---

autodoc.el	3
printPDF	3
printPDF	3
autodoc.el	4
printPDF	4
printPDF	4

Prerequisites

autodoc requires emacs and pdftex with some packages installed:

inputenc

babel

caption

geometry

fancyhdr

lastpage

minted

hyperref

float

Files

autodoc.el

autodoc.el contains the whole autodoc script

printPDF

printPDF takes a directory and a file in arguments and generates the pdf associated to file.tex in directory

```
(defun printPDF (directory file) ... )  
=> command
```

printPDF

printPDF takes a directory and a file in arguments and generates the pdf associated to file.tex in directory

```
(defun printPDF (directory file) ... )  
=> command
```

autodoc.el contains the whole autodoc script

printPDF

printPDF takes a directory and a file in arguments and generates the pdf associated to file.tex in directory

```
(defun printPDF (directory file) ... )  
=> command
```

printPDF

printPDF takes a directory and a file in arguments and generates the pdf associated to file.tex in directory
